

How to Configure Automatic Updates with Norton Antivirus for Macintosh OS 9

Important Information

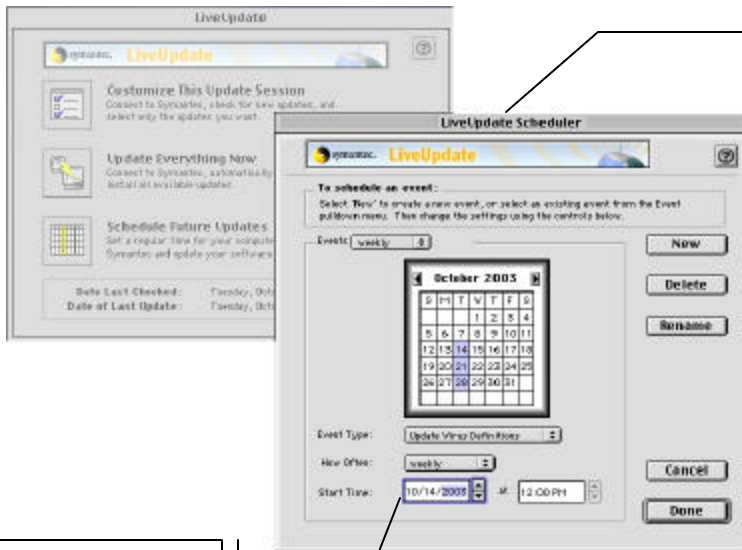

Setting automatic updates is an important step that needs to be done after installing Norton Antivirus. By setting automatic updates, you ensure that you are fully protected against the latest virus threats. New viruses are discovered daily. Protect yourself and your computer investment by updating Norton Antivirus.

Click on the **Apple Icon** (at the top left of the screen) and select **Control Panels**.

Click on **Norton AntiVirus**. This screen should appear.

Click on **Live Update** and follow the instructions below

Click on **Schedule Future Updates**. The following window should appear.

Click **New**.

Select a name for this event. You can call it **Weekly** if you wish.

Select **Update Virus Definitions** for the **Event Type**.

Select **Weekly** for **How Often**.

Select a **Start Time**. The default is now.

Click **Done**.

You can select any **Start Time** that you wish. Just be sure that the computer is turned on and has internet access during the time you selected to update.

You can create additional scheduled events in the same manner to update different parts of the Antivirus program. The most important is the Virus Definitions. Norton Antivirus uses these definitions to identify virus threats to your computer.

Be sure that **Auto Protect** remains **ON** so that your computer is always protected.
