How to Configure Automatic Updates with Norton Antivirus for Microsoft Windows

Important Information

Setting automatic updates is an important step that needs to be done after installing Norton Antivirus. By setting automatic updates, you ensure that you are fully protected against the latest virus threats. New viruses are discovered daily. Protect yourself and your computer investment by updating Norton Antivirus.

Double click on the gold shield icon in the bottom right corner of your screen.

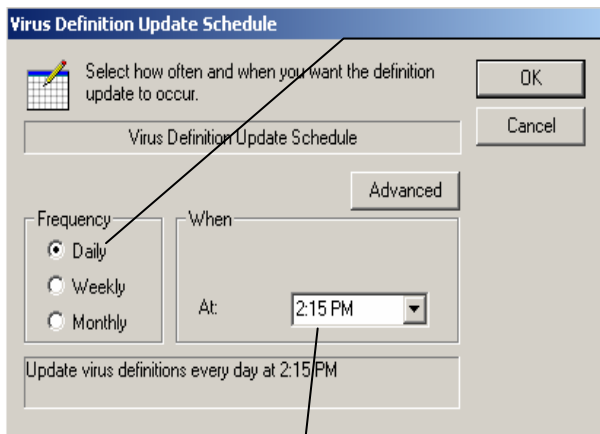

Click on **File** and select **Schedule Updates**.

The **Schedule Virus Definition Updates** window will appear.

Ensure that there is a check mark in **Enable scheduled automatic updates**.

Click the **Schedule** button.

The **Virus Definition Update Schedule** window will appear.

Ensure that **Frequency** is set to **Daily**.

Select the time to start the update.

You can select any time that you wish. Just be sure that the computer is turned on and has internet access during the time you selected to update.

Setting Automatic Updates for Norton Antivirus is a good way to protect your PC.

Another way is to keep your computer's Operating System updated by using the **Microsoft Update** website.
